THIS WEEK:

Microsoft Dataverse Part 1:

**What is
Dataverse?**

Where Does Your Business Data Live?

For many organisations, it's spread across:

Spreadsheets

Shared drives

SharePoint lists

Emails

Multiple systems

Everyone has data. Nobody has the full picture.

So, What Actually Is Dataverse?

Dataverse is Microsoft's secure business data platform.

It provides a central place to store and manage information that can be used across:

-  Power Apps
-  Power Automate
-  Power Pages
-  Power BI

One source of truth. One connected platform.

Think Beyond Customer Records

Dataverse can manage:

Customer and contact data

Projects and operations

Assets and inventory

Service requests and cases

Applications and forms

Training and compliance records

Structured, secure and easy to connect.

More Than Just a Database

- ✓ Built-in security
- ✓ Relationships between data
- ✓ Business rules and validation
- ✓ Audit history and governance
- ✓ Scales as your organisation grows

Dataverse helps ensure your apps, automations, portals and reports are all working from the same information.

Less time managing data. More time using it.

If you're building apps and processes on top of spreadsheets, it might be time for a stronger foundation.

Message me to see what's possible with Dataverse.
